

DERMELUXX FACIAL

AFTERCARE

DERMELUXX FACIAL AFTERCARE RECOMMENDATIONS

The DermeLuxx Facial is a non-invasive treatment. It uses a vacuum applicator to draw in skin tissue to clean and deliver active serums depending on skin type and conditions. It also uses an oxygen hand-piece to deliver serums to the skin, and cryo applicator for holistic skin tightening.

The treatment is soothing, moisturizing, non-invasive and generally non-irritating. As with most procedures, visible results from a DermeLuxx Facial will vary from person to person.

What to expect during and after the treatment:

After the DermeLuxx Facial Treatment your skin may experience the following:

- temporary irritation
- redness, or tightness
- tingling and stinging in the treatment area.

These reactions are all normal, typically resolving within 48-72 hours depending on skin sensitivity.

Majority of DermeLuxx Facial customers see the results immediately after the treatment. Your skin may feel smooth and hydrated for a few weeks if you use appropriate home care to maintain treatment results.

DermeLuxx Facial treatments are recommended every one to two months depending on your skin type and condition for optimal results.

Client experiences may vary. Some people may have a delayed onset of the previously mentioned symptoms. Please, contact us immediately if any unusual side effects occur or if symptoms worsen overtime.

DERMELUXX FACIAL AFTERCARE RECOMMENDATIONS

NEXT STEPS

- After DermeLuxx Facial Treatment, protect your skin from sunburn/sun damage.
- Avoid excessive sun exposure and use a minimum of SPF 40 sunscreen.
- Aggressive exfoliation, waxing and products containing acids should be avoided in the treatment area for a minimum of two weeks pre- and post-treatment.
- Please avoid the use of Retin-A type products pre- and post-treatment.
- Drink plenty of water to keep body and skin hydrated.

Smiling and positive energy improves good skin health.
